

## OUTAGE MANAGEMENT THROUGH AMR DATA

**Check the modems power supply healthiness, network healthiness & Modem healthiness through LEDs mounted on the modem top cover.**

**Sending of SMS to the SIM if SIM is not automatically configured, so that modem should connect to the server through the respective network service provider.**

**Configuration of modem from remote end through POTA to work and to send the meter data as per the configured schedule.**

**Check the MRD files received from the meter and CRC to confirm weather all the data tables from the meter received or not.**

**Passing the MRD files through protocol of the meters manufacturer or DLMS protocol if meter is DLMS type**

**Receiving of CDF files and sending same to the MDAS S/W application**

**Capturing of meter power failure event & pushing same into the server, based on this sending SMSs to the respective AE / ADE / DE & HT consumers under the 11KV feeder**
